

SF Cisco Stealthwatch Foundations

Duration: 1 Day

Course Overview:

This Foundations course introduces Cisco Stealthwatch Enterprise and provides foundational information to ensure that you understand basic concepts and terms.

Modern enterprise networks are larger and more complex than ever before, so it takes a robust and complex system like Stealthwatch to defend them. The same complexity that makes Stealthwatch such a powerful tool can also make it seem intimidating to new users. It is important to understand the system's foundational concepts and terminology before delving into its detailed processes and procedures.

Who Should Attend:

The primary audience for this course is as follows:

- Anyone who has an interest in the Stealthwatch System
- Individuals who have deployed the Stealthwatch System.
- Users upgrading to new versions for the Stealthwatch System.
- Users who have inherited the Stealthwatch System.

Course Objectives:

Upon completing this course, the learner will be able to meet these overall objectives:

- Describe the Stealthwatch System, how it works, and how it adds value.
- Explain network behavior analysis and baselining.
- Summarize how Stealthwatch uses flow to provide network visibility.
- Define the purpose, primary characteristics, and Stealthwatch classifications of hosts and host groups.
- Describe the Stealthwatch detection model.

Prerequisites:

There are no prerequisites for this course.
